

Rapid Thermal Process Oven NIR Halogen Lamps

RTP involves heating silicon wafers to an extremely high temperature, often well over 1000°C, by means of a high-intensity infrared emitting lamp

1. Technical specifications of some halogen lamps

Diameter MM	Overall Length MM	Power W	Voltage V	Coating

Infrared heating solution for a broad range of industries

Anhui Quickly Industrial Heating Technology Co.,Ltd is a family of privately-owned companies focused on the development of infrared heating technology which dramatically reduces the time and space required for industrial heating and drying processes and provides quantum leaps forward in efficiencies for our global customers.

QUICKLY specializes in the engineering and supply of heating elements, components, and ovens for a vast array of industries. We are your expert process and infrared industrial heat consultants.

QUICKLY has experience in meeting the needs of a broad range of industries. Applications includes semiconductor manufacturing and solar cell fabrication, paper, printing, textiles, non-woven products, liquid coating, powder coating, adhesives, laminating, welding, thermoforming, and annealing. We will continue to provide excellent process heating solutions for today's industrial needs, and for the challenges of tomorrow.

Thank you for letting us serve you. I pledge that we are dedicated to offering you world-class products promptly and with the best service and pricing possible. Our team provides excellent technical infrared heat consultants and application support, ensuring that the right products are selected for your unique situation each and every time.

We look forward to working together with you.
